Moonside Live Partner one-pager · 2026

The Mac streaming app where your Auto-Tune goes live in real time.

A native Mac app for musicians, gamers and creators. It captures the exact sound of Logic, FL Studio, Ableton — or BandLab in the browser — with every plugin on, and streams to Twitch, YouTube, Kick, TikTok and Instagram at once, in 16:9 and 9:16. Live in two minutes, no virtual cables, no plugins to install.

Real-time Auto-Tune and effects, exactly as the artist hears them.
The DAW's output is taken directly (no virtual audio driver), synced to the camera automatically, levelled to the platforms' standard (–16 LUFS) with a limiter, and sent everywhere at once. What the artist hears in the headphones is what the viewers hear.

5 platforms
Twitch, YouTube, Kick, TikTok, Instagram at once

16:9 + 9:16
Landscape and vertical from one live

2 minutes
From download to live

Native Mac
Apple silicon & Intel, macOS 13+, notarized

What's different from OBS

DAW sound + plugins, real time	Built in	Virtual driver + routing
Multistream, 5 platforms	Built in	Plugin / paid service
16:9 and 9:16 at once	Built in	Plugin, 2nd canvas
One chat + alerts	Built in, with replies	Third-party widgets
Cutout without green screen	Built in	Plugin / green screen
Loudness to standard	One click	Manual filters
Console via capture card	Gaming tab, 1 click	Build it yourself

Ideas for working together

- **Bundles:** “Buy our product, get 3 months of Moonside Live Pro” — or the reverse.
- **Certified workflow:** a one-click preset for your plugin, interface, mic or capture card.
- **Content:** tutorials and live sessions with your product in a real-time stream.
- **Sponsorship:** giveaways and features in our launch campaign.

Who uses it

- Singers & producers streaming with their vocal chain
- Gamers on MacBook with a PS5 / Xbox / Switch
- Editors streaming CapCut, Premiere, DaVinci sessions
